

All organizations have data and information. Many are not sure where it is or how to access it. We enhance your prospects of success by bringing organization and collaboration to YOUR data, YOUR people and to YOUR business. Technology combined with expertise can assist an organization to find and cleanse existing data and close the gaps. We improve business by providing visibility to key information to:

- Streamline Communications
- Improve Efficiency
- Leverage Knowledge
- Protect Intellectual Property
- Increase Profits

Leveraging existing systems & tools

By empowering your internal and external teams to be more effective, along with access to insights from the mass amounts of data within your systems, expedient impacts can be created and performance can be enhanced when data is organized, integrated and presented in a fashion that allow professionals and executives to draw conclusions and make informed business decisions. We strive to enhance operations and productivity by uniting all facets of your organization.

Advisory Services

As a trusted advisor, we help clients optimize operational performance by first understanding the existing situation and requirements. We then research options through the lens of criteria and thresholds to form an optimal solution. Our experienced team is focused on helping our clients work more collaboratively through their people, systems and processes. We empower our clients by offering a broad suite of services and solutions which span the spectrum of their needs. Our expertise of aligning people with the systems and workflows, allow our clients to achieve their goals and organizational objectives to streamline applications and leverage information as well as structure data for better visibility and analysis. CWE deploys advanced analytics to gain better insights and to drive protocols and consensus for improved operations

Assessments

This review is a combination of desk & on-site audits and analysis to define the current delivery model and ensure that the data accurately accounts for all costs and requirements. The departmental Service Delivery Process Maps define current systems, capabilities and processes along with the service level requirements. This baselines operations and defines the process improvement potential based on any constraints.

Deployments

We use this information to design programs, projects, and action plans that reduce IT operational costs. Programs control a prioritized mix of services designed to provide optimum financial and service level impact. Prioritization will be tailored to the culture and change readiness of your systems and organization.
